When utility power fails, your home standby generator starts automatically and the automatic transfer switch connects it to your home's electrical system. Which enables it to maintain power to your most vital appliances such as your air conditioner, refrigerator, freezer, heater, medical devices, sump pump, and wall outlets.

The switch monitors both power sources, signals generator set startup, automatically transfers power, and returns the load to the primary power source when the utility returns and stabilizes. OTPC transfer switches are available with closed transition transfer. By briefly connecting the two sources (for 100 msec or less), the transfer from the alternate source back to the normal source occurs without interruption in the power supply to loads.
