The software package Gas Chromatography-Mass Spectrometry: A Knowledge Base, by F.A. Settle, Jr. and M.A. Pleva provides rapid access to a wealth of current information in the GC-MS field. Its three diskettes (5 1 / 4 inch) allow the user three ways to access: the index mode, the tree mode and a keyword search mode.

Chromatography-mass spectrometry (GC-MS) combines the features of gas-liquid chromatography (GC) and mass spectrometry (MS). This makes it possible to identify different substances within a test sample. GC-MS has many uses include drug detection, fire investigation, environmental analysis and explosives investigation. It can also be used to identify

Mass spectrometry (MS) is an analytical technique that measures the mass-to-charge ratio of ions. The results are typically presented as a mass spectrum, a plot of intensity as a function of the mass-to-charge ratio. Mass spectrometry is used in many different fields and is applied to pure samples as well as complex mixtures.

Mass spectrometry - Wikipedia

Gas Chromatography
Gas chromatography is used to separate mixtures of compounds that are volatile or can be made volatile. 5 GC may be gas–solid chromatography, with a solid stationary phase, or gas–liquid chromatography (GLC), with a nonvolatile liquid stationary phase. GLC is commonly used
