On initial start-up, allow the refrigerator to cool for 8-12 hours on the coldest temperature setting before loading it with food. Warm foods, high ambient temperatures, and frequent door openings will increase the cooldown time. Do not cover the shelves with plastic, paper, etc. If the unit does not start to cool after two hours, contact your dealer or a Norcold authorized service center.

Norcold makes small refrigerators that are commonly found in RVs and boats. When the refrigerator is showing a "No Cooling" error code the unit must be repaired. There could be any number of reasons for the code to appear. When the repair is finished, the last step is to reset a Norcold control board to clear the error.

**How to Reset a Norcold Control Board | Hunker**  
Rule out a low-voltage issue by testing the leads going into the refrigerator control panel with a multimeter tool. Your refrigerator should have an AC voltage of 108 to 132 volts and a CV voltage of 10.5 to 15.4 volts. Keep in mind that the Norcold refrigerator needs full battery power to ignite.
